										Based on the general scope of ethical hacking and cybersecurity education, the app covers a broad range of topics for its users to inform them about various aspects of cybersecurity. These topics include: Assets: Identifying what needs protection, such as data, devices, and networks. Attacks: Understanding different types of cyberattacks and how they are executed. Countermeasures: Learning about strategies and tools to prevent attacks. Risks: Identifying potential threats to cybersecurity and their impact. Threats: Identifying potential sources of cyber threats. Vulnerabilities: Understanding weaknesses that could be exploited by attackers. The app is designed to provide users with cybersecurity knowledge and skills to protect their digital assets and information.															
DP002	com.ethical.hacking.university	Ethical Hacking University App	38.0.0	16.09.2020	08.03.2024	Education	632428	4.68910	Storage, Other	Assets: Attacks, Vulnerabilities, Countermeasures, Risks, Threats	Push [22]	Yes [22]	Normal Users	Assets, Attacks, Vulnerabilities, Countermeasures, Risks, Threats	Assets: Attacks, Vulnerabilities, Countermeasures, Risks, Threats	None	The Ethical Hacking University app provides comprehensive cybersecurity education, enabling users to learn about various aspects of cybersecurity through interactive modules and practical exercises.	Yes	Educational Technology

- Course updates
- New content availability
- Reminders for enrolled courses or lessons
- Announcements about webinars or events
- Promotional offers and discounts
- General app updates and feature enhancements

[2]

- Course Updates: Notifications about new course content, modules, or learning materials.
- Reminders: Notifications to remind users about upcoming classes, assignments, or deadlines.
- Promotional: Notifications about special offers, discounts, or promotions related to the app's content or services.
- Announcements: Notifications regarding important announcements, events, or changes to the app's features or policies.

[3] Identify: Understanding and managing the security risks to mobile devices.

Protect: Providing security measures such as malware protection.

Detect: Notifying users about security threats, privacy risks, and potential vulnerabilities on the device.

Respond: Change compromised passwords

[4]

Study Reminders

Users can set study reminders in the settings tab by toggling the notification to active and choosing specific days of the week and times for reminders. The content of the reminders can also be customized.

Daily Question Ready Notification

The app notifies users when the daily question is ready with a large call to action appearing over the progress bar

[5] there is browser version

[6]

Security Threat Alerts: Users receive notifications when the app detects potential security threats, such as malware, phishing attempts, or suspicious activities on the device.

Scan Results: Notifications about the results of scans performed by the antivirus software, including details about any identified threats or issues.

Update Reminders: Notifications to prompt users to update the antivirus app or virus definitions to ensure the latest protection against emerging threats.

Scheduled Scans: Notifications reminding users about scheduled or recommended scans to maintain the security of their devices.

[7] and browser

[8]

Identify: This function involves identifying and understanding the security risks, vulnerabilities, and threats to mobile devices, as well as recognizing the importance of securing personal and sensitive information.

Protect: This function encompasses the protective measures and safeguards implemented by the app to secure mobile devices from malware, phishing attempts, and other digital threats.

Detect: The app is designed to detect and identify potential security threats, including malware, suspicious activities, and other risks that may compromise the security of mobile devices.

Respond: The app provides users with the capability to respond to security incidents and take appropriate actions to mitigate the impact of identified threats or vulnerabilities.

[9] Identify: Smart Home Monitor, Data Leak Checker, Apps Permission Manager

Protect: Antivirus Protection, Anti-Phishing, Safe Browsing, Safe Messaging, Password Manager, VPN, Social Privacy, Quick Scan, Full Scan, File Antivirus, Unused Apps Cleanup, Stalkerware Detection, Call Filter, App Lock, Identity Protection Wallet

Detect: Background Scan, Data Leak Checker, Stalkerware Detection, Smart Home Monitor

Respond: Where Is My Device, Device Lock in case of theft

[10] notifications related to promotions and upgrades to its pro subscription

[11] browser version

[12] identify, protect, detect, respond if we consider what are people being taught about

[13] Identify: App Insights, Hack Alerts

Protect: Antivirus Engine, Photo Vault, App Lock, Web Shield, Wi-Fi Security, VPN, Email Guardian

Detect: Antivirus Engine, Hack Alerts, Scam Protection, Email Guardian

[14] Norton Genie: AI Scam Detector app provides notifications regarding potential scams or suspicious content in text messages, emails, websites, and social media posts. When the app scans and reviews these messages, it offers instant advice on whether the content could be a scam, providing guidance on next steps. Additionally, it can provide tips on what to do next and answer follow-up questions about the nature of the potential scam. The Norton Genie: AI Scam Detector app also provides notifications related to the security status of your device, including alerts about potential security threats, vulnerabilities, or suspicious activities detected on your phone.

[15] browser

[16]

Identify: The app helps users identify potential security risks, vulnerabilities, and threats to their digital assets and online activities. This may include identifying personal data exposure, weak passwords, or unsecured connections.

Protect: It provides guidance and tools to protect users' digital assets, such as offering advice on secure password management, safe browsing practices, and data encryption.

Detect: The app is designed to detect potential security threats and suspicious activities on users' devices or within their online accounts. This may include identifying malware, phishing attempts, or unauthorized access.

Respond: In the event of a security incident, the app may provide guidance on how users can respond effectively, such as reporting suspicious activity, containing a security breach, or seeking assistance from security professionals.

[17] Identify: App Insights

Protect: Virus cleaner, Smart on-install virus scanner, Real-time scanning

Detect: On-demand scanning

Respond: Upgrade option to lock, locate, and wipe device in case of loss or theft

[18]

Security Alerts: Notifications about potential security threats, such as malware detection, phishing attempts, or unsecured Wi-Fi networks.

VPN Connection Status: Updates on the status of your VPN connection, including when the VPN is activated or deactivated.

App Updates: Notifications regarding updates to the app itself, including new features, bug fixes, or improvements to security protocols.

Scan Results: Notifications informing you of the results of periodic scans for malware and other security risks on your device.

Privacy Alerts: Notifications about potential privacy risks or data breaches related to your online activities or installed apps.

[19] and browser

[20]

Identify: The app helps users identify potential security threats, privacy risks, and vulnerabilities on their devices and networks.

Protect: It offers protection against malware, phishing attempts, and unsecured Wi-Fi networks, safeguarding users' devices and data.

Detect: The app detects security threats, including malware and privacy risks, through scans, real-time monitoring, and security alerts.

Respond: It enables users to respond to security alerts, take action against detected threats, and manage their security settings promptly.

[21] Identify: Antivirus Scan, Pre-Installation Scan, Web Guard

Protect: Advanced AI scan, Pay Guard Mobile, Privacy Scanner, Wi-Fi Checker, Parental Control

Detect: Advanced AI scan, Web Guard, Fraud Buster, Privacy Scanner, Wi-Fi Checker

Respond: Lost Device Protection & Anti-Theft, Fraud Buster

Recover: Lost Device Protection & Anti-Theft, Device wipe

[22] Security Threat Notifications:

Bitdefender Mobile Security notifies you about any security threats it detects on your device, such as malware, viruses, or phishing attempts.

Privacy Notifications:

It alerts you about potential privacy risks, such as apps accessing sensitive data without permission or insecure Wi-Fi networks.

App Update Reminders:

The app may notify you about available updates for your installed apps, helping you keep them up to date and secure.

Anti-Theft Notifications:

If you've enabled anti-theft features, the app can send notifications related to your device's location, remote lock or wipe commands, or SIM card changes.

Scheduled Scans and System Checks:

You may receive notifications regarding scheduled malware scans or system checks to ensure your device's ongoing security.

Subscription Renewal Reminders:

For users with a subscription, Bitdefender Mobile Security may send notifications about upcoming subscription renewals or expirations.

Customizable Alerts:

The app allows you to customize notifications based on your preferences, so you can choose to receive specific alerts according to your needs.

[23] browser too

[24]

Identify: Understanding and managing the security risks to mobile devices.

Protect: Providing security measures such as malware protection, privacy audits, and anti-theft features to safeguard the device.
Detect: Notifying users about security threats, privacy risks, and potential vulnerabilities on the device.

[25] Identify: Device Report Card

Protect: VPN, Ad Blocker, Malware Scanner, Antivirus, SMS Security

Detect: WiFi Analyzer, App Scanner, Spyware Detection, Internet Security

Respond: WiFi Security Alerts

[26]

Network Events: Notifications about changes or events related to the devices and networks you are monitoring, such as new device connections, network outages, or changes in network status.

Security Alerts: Notifications about potential security risks, vulnerabilities, or suspicious activities on your network, providing you with real-time information to enhance the security of your network.

Performance Updates: Notifications related to the performance of your network, including speed tests, network latency, or bandwidth usage alerts.

[27] and Desktop

[28] Identify: Fing - Network Tools helps to identify connected devices, network vulnerabilities, and potential security risks within the network. Protect: The app assists in protecting the network by providing insights into security vulnerabilities and potential threats, allowing users to take proactive measures to secure their network.

[29] Only learning app only:

Protect: protect yourself with knowledge :)

[30]

Security alerts for potential threats or vulnerabilities detected on the device.

Notifications regarding scheduled or recommended scans for malware and other security risks.

Alerts for app updates, especially those related to security patches or fixes.

Notifications for any privacy-related issues or concerns detected on the device.

[31]

Identify: By identifying potential threats and vulnerabilities on the device.

Protect: By offering features to protect the device from security risks and privacy concerns.

Detect: By providing real-time threat detection and alerts for potential security issues.

[32] Identify: Discover your devices,

Protect: Manage security, Parental controls, Web filtering

Detect: Instant threat notifications, Anomaly detection, Real-time notifications for threats

Respond: Scan, clean, and optimize devices, Send text/sound alerts, Pause internet connection

Recover: Locate lost/stolen devices

[33] Only learning app only:

Protect: protect yourself with knowledge :)

[34]

Identify: By providing visibility into every device that accesses applications, Duo helps organizations identify vulnerable devices and compile a full device inventory. This aligns with the Identify function by managing cybersecurity

risks to systems, people, assets, data, and capabilities.

Protect: Duo Mobile's use of multi-factor authentication (MFA), device trust, and adaptive access policies helps protect systems and data from unauthorized access. This aligns with the Protect function, which outlines safeguards to ensure delivery of critical infrastructure services.

Detect: Through detailed reports and Trust Monitor, Duo Mobile offers capabilities to detect unauthorized access attempts and unusual login patterns, aligning with the Detect function that defines activities to identify the occurrence of a cybersecurity event.

Respond: Duo's capabilities to monitor and notify about unusual login patterns indirectly support the Respond function by taking action regarding a detected cybersecurity incident.

Govern: Although not explicitly mentioned as "Govern," Duo Mobile's adherence to various compliance standards and guidelines, including SOC 2, FIPS, FedRAMP, and NIST guidelines, demonstrates its role in governance, ensuring policies and procedures are followed to manage and reduce cybersecurity risk.

[35] Duo Free: Basic features including strong Multi-Factor Authentication (MFA), Passwordless, Single Sign-On (SSO), and Trusted Endpoints verification.
Duo Advantage: Includes additional features such as detailed device health monitoring, adaptive user, device, and application access controls, and a secure SSO experience.
Duo Premier: The most comprehensive solution offering complete zero trust access for every application and VPN-less remote access to private resources

[36] but there is a browser version

[37] Only learning app only:

Protect: protect yourself with knowledge :)

[38] \$58.99 per month as In-app purchase after 7 Day trial is over

[39] App Tracking Protection Notifications

Tracking Alerts: Notifies you when third-party trackers are blocked within other apps on your device, providing details on which apps attempted to track you.

Privacy Protection Notifications

Privacy Report Updates: Regular updates on the number of trackers blocked and other privacy-related activities within the browser.
Cookie Pop-Up Protection: Notifications about the automatic handling of cookie consent pop-ups, ensuring the most private options are selected.

Security Notifications

Encryption Alerts: Alerts when a website's connection is not secure or encrypted, helping you stay informed about your browsing security.
Fingerprinting Protection: Notifications when fingerprinting attempts are blocked, providing details on the protection actions taken against tracking attempts.

Feature Updates

New Features and Improvements: Notifications informing you about new features, updates, or enhancements to the DuckDuckGo app, such as improvements to page load performance or new privacy tools.

[40] but there is a browser version

[41]

Protect:

DuckDuckGo excels in this function by offering features like tracker blocking, smart encryption, and private search, all of which protect users from being tracked and ensure their search information remains private.

Detect:

The app provides features that detect and block trackers in real-time, offering users insight into tracking attempts and the entities behind them.

[42] The DuckDuckGo Private Browser app itself is free and offers in-app purchases. Specifically, it provides a subscription service called Privacy Pro, which includes features like a VPN to secure your connection on up to 5

devices, personal information removal from sites that store and sell it, and identity theft restoration assistance if your identity is stolen. Privacy Pro requires a subscription, and payment is charged automatically to your iTunes account until you cancel, which you can do in the app settings

[43] all types possible

[44] Protect: Second step of verification

Recover: Sync codes to Google Account, Transfer accounts between devices

[45]

Protect: This function is covered by the app through its various security features like password protection and encryption to safeguard private photos and videos. It ensures the delivery of critical infrastructure services while limiting the impact of potential cybersecurity events.

Detect: Safelock provides features that could fall under this function, such as break-in alerts that notify the user of unauthorized access attempts. This aligns with detecting anomalies and ensuring the potential impact is understood

[46] The premium subscription unlocks all features to manage personal content within the app, such as additional lock patterns, Touch ID, extra security features for internal albums, and more. The subscription plans include options for 1 month at \$1.99 and 12 months at \$11.99

[47] Protect: Password Protected App Entry, Pin Lock, Pattern/Dot Lock, Password Protected Photo Albums

Detect: Break-in Report (Photo + GPS data logged)

[48] Yes, up to 39.99\$ per year. as in-app purchase

[49] Security Alerts, Password Expiry Reminders, Sync Status, Software Updates, Backup Reminders.

[50]

Identify: mSecure helps users identify and catalog their sensitive information, such as passwords, credit card details, and other personal data.

Protect: The app provides protection through encryption, secure password generation, biometric authentication (Face ID/Touch ID), and secure storage of data.

Recover: mSecure offers secure backup and recovery options to ensure users can restore their data if needed.

[51] mSecure offers both a free version and a paid version, known as mSecure Pro. The Pro version is available as a one-time purchase, providing enhanced features over the free version. These features often include advanced security options, more customization, cloud syncing across devices, and additional types of entries like bank accounts, memberships, and many others.

[52] No app, but has desktop Version as a website

[53] allows to study for 21 different exams. might be used in business context or experts to get a certificate.

[54] Only learning app only:

Protect: protect yourself with knowledge :)

[55] 119.99\$ per year

[56]

Connection Status: Notifications about when the VPN connection is established or disconnected.

Connection Issues: Alerts if there are problems connecting to a VPN server or if the connection drops unexpectedly.

Security Alerts: Notifications about potential security threats or suspicious activity detected.

Subscription Reminders: Reminders about subscription expirations, renewals, or special offers.

App Updates: Information about new features, updates, or important changes in the app.

Usage Tips: Tips and best practices for using the VPN service effectively and securely.

Promotional Messages: Notifications about promotions, discounts, or new service offerings.

[57]

Protect:

The app encrypts internet traffic, helping protect users' data from interception and unauthorized access.

It masks IP addresses, protecting users' identity and location.
It provides secure connections to prevent data breaches and cyber-attacks.

Detect:

While the app itself is not a detection tool, it can prevent certain types of malicious activities by blocking trackers and malicious websites through features like CleanWeb.

Respond:

The app can automatically reconnect or alert users when the VPN connection drops, ensuring continuous protection.

[58] VPN connection status

[59] other information not provided by app

[60] Protect: User privacy, No recording of personal information, Secure VPN

[61] completely free

[62]

VPN Connection Status: Alerts when the VPN is connected or if there's a disconnection, ensuring users are aware of their privacy status.

Security Alerts: Notifications about potential security threats detected while browsing or using apps, such as malicious websites or unsecured Wi-Fi networks.

App Activity Monitoring: Alerts related to the monitoring of app activities that could compromise privacy, informing users of any suspicious behavior.

Data Usage: Information on data usage through the VPN, which can be particularly useful for users monitoring their data consumption.

Updates: Notifications about updates to the app itself, including new features, bug fixes, or enhancements to improve performance and security.

Promotional Offers: For apps that include freemium models or in-app purchases, notifications might include promotional offers or incentives for premium features.

[63] Protect: By providing a VPN service, the app helps protect information and communications through encryption, thereby securing data from unauthorized access.

Detect: It can alert users to potentially harmful activities or unsafe connections, acting upon the detection of threats or insecure environments.

[64] the Phone Guardian Mobile Security app for iOS primarily operates on a freemium model, offering its core services for free while also including optional in-app purchases for advanced features. This model allows users to benefit from basic VPN functionalities at no cost, with the option to enhance their security and app capabilities through paid upgrades.

[65] Notifications of messages. Content is end to end encrypted, but it is known that law enforcement has the ability to de-anonymize users by using a timing attack (tracking message timestamps)

[66] Protect: End-to-end encryption

Govern: Open source Signal Protocol, Independent non-profit organization

[67]

Security Alerts: Notifications about potential security issues, such as compromised, weak, or reused passwords, prompting users to update their credentials for enhanced security.

Sync Notifications: Alerts informing users when their data has been successfully synced across devices, or if there are any issues with syncing.

Update Reminders: Reminders to update the app to the latest version to ensure optimal functionality and security.

Two-Factor Authentication (2FA) Prompts: Notifications related to 2FA, such as codes for login verification.

Form Filling Notifications: Alerts when RoboForm has successfully filled in a form or login details on a website or app.

Password Generation: Notifications offering to generate a strong password when you're signing up for a new service or changing an existing password.

Subscription Updates: For users of the paid version, notifications about subscription status, renewal reminders, or promotional offers.

[68] Protect: RoboForm covers this function well by providing strong encryption for stored passwords and sensitive data, generating strong passwords, offering secure form filling to protect against phishing, and enabling two-factor authentication (2FA) for additional security layers.

[69] RoboForm Password Manager offers both a free version and a paid subscription model, known as RoboForm Everywhere, available in the iOS App Store. The free version provides basic features such as password storage and autofill functionality. In contrast, the paid subscription typically includes advanced features such as cloud backup, multi-device synchronization, secure sharing, web access, and premium 24/7 support.

[70]

Threat Alerts: Notifications about viruses, malware, or any other potential threats detected on the device.

Network Security: Alerts when you connect to an insecure or unprotected Wi-Fi network.

Privacy Protection: Notifications regarding apps that may be infringing on your privacy or accessing more information than necessary.

Performance Alerts: Information about available updates, or recommendations for improving device performance, such as removing junk files or optimizing battery usage.
Anti-Theft: Alerts related to the anti-theft features, such as if the device is marked as lost or if someone attempts to unlock the device unsuccessfully.
VPN Alerts: Notifications about VPN connection status, like when you're connected to a VPN server for secure browsing.
Subscription and Update Notifications: Information about your subscription status (for premium features) and updates to the app or virus definitions for keeping the protection up to date.

[71]

Protect: Avast Security & Privacy excels in this function by providing tools and features designed to safeguard devices and data from unauthorized access and cyber threats. This includes antivirus protection, Wi-Fi security checks, VPN services for secure browsing, and app privacy insights.

Detect: The app is actively engaged in detecting cybersecurity events and anomalies. It alerts users about malware, phishing attempts, and other forms of attacks or unauthorized activities on their devices.

[72] Avast Security & Privacy offers a paid version in the iOS App Store. This premium version typically includes advanced features such as enhanced security measures, VPN services for online privacy, identity protection, and additional tools to improve your device's performance. The paid version is designed to provide a more comprehensive security solution compared to the free version, with subscription plans available for users seeking these extra capabilities.

[73] VPN connection status

[74] Protect: Encrypt data, hide IP and location, safeguard public Wi-Fi connections.

[75] up to 59.99\$ per year as in-app purchase

[76]

Security Alerts: Notifications about potential security threats detected on your device or within apps you've installed.
VPN Connection Status: Updates on the status of your VPN connection, including when you're securely connected to a VPN server or if there's an issue with the VPN service.
Privacy Protection Alerts: Alerts if the app detects a privacy risk, such as a breach involving your personal data.
Wi-Fi Security: Notifications about the security of your Wi-Fi connection, including warnings about unsecured or suspicious Wi-Fi networks.
Anti-Theft Alerts: If you've enabled anti-theft features, you might receive notifications about the location of your device if it's been marked as lost or stolen.
Device Performance: Updates on your device's performance, including reminders to clean up unnecessary files or manage apps for optimal performance.
Subscription and Update Information: Notifications about your subscription status, including reminders about renewals or updates to the app that are available for download.

[77]

Protect: Covered. McAfee Security: Privacy & VPN provides several features to help protect devices from cybersecurity threats. This includes VPN services for secure and private internet browsing, password management to protect user accounts, and security settings optimization to enhance device protection.

Detect: Covered. The app includes capabilities to detect a wide range of cybersecurity threats, such as malware, phishing attempts, and potentially unwanted programs (PUPs). It alerts users to suspicious activities and insecure Wi-Fi connections, helping to promptly identify security issues.

[78] McAfee offers several subscription plans for its services, including those tailored for iOS devices. These services typically encompass a range of features including privacy protection, VPN (Virtual Private Network), and other security measures aimed at protecting your device from malware, phishing, and other cyber threats.

[79] Protect: Secure hiding, Lock screen, Disguise screen, Automatic locking, Escape unlock code

Recover: Backup on Cloud storage, USB export

[80] Cloud storage option for 7.99\$ as in-app purchase

[81]

Threat Alerts: Notifications about detected malware, phishing attempts, and other security threats.
VPN Status: Alerts regarding the status of the VPN connection, including when it is activated or disconnected.
Wi-Fi Security: Notifications about the security status of Wi-Fi networks, warning users about potentially insecure or compromised networks.
System Vulnerabilities: Alerts about outdated software or system settings that may pose security risks.
Identity Protection: Notifications related to identity protection, such as potential breaches involving personal information.
App and Web Protection: Alerts about suspicious apps and potentially dangerous websites.

Subscription and Account Information: Notifications regarding subscription status, renewals, and account-related updates.

[82]

Identify: The app helps identify potential security risks and vulnerabilities on the device.

Protect: It provides protective measures such as a secure VPN, safe browsing features, and real-time protection against threats.

Detect: The app detects various types of cyber threats, including malware, phishing attempts, and insecure Wi-Fi networks.

Respond: It offers response actions to mitigate detected threats, such as removing malware and providing security alerts and recommendations.

[83] Norton 360 for Mobile offers a paid version on the iOS App Store. The paid version typically includes additional features and enhanced protection compared to the free version, such as:

Advanced Threat Protection: Enhanced security features to protect against malware, phishing, and other threats.

Secure VPN: Access to a secure VPN service for encrypted and private internet browsing.

Web Protection: Safe browsing features to protect against dangerous websites and online threats.

Device Security Alerts: Real-time alerts for potential security risks and vulnerabilities.

Identity Theft Protection: Features to help protect your personal information and monitor for potential identity theft.
